

***Please note: your wallet needs to be running and synced to mine.***

1. Create a folder named PoA Miner.
2. Download dapscoin-poa-minerd from <https://github.com/DAPSCoin/POA-Miner/releases/tag/latest>. Extract the downloads into the PoA Miner folder.
3. Create your own or download the sample poa\_miner\_configuration.json file below. Place in the same PoA Miner folder.
4. Edit poa\_miner\_configuration.json in a text editor:
  - Change the admin:admin123\$ to match your RPC user and RPC password from dapscoin.conf (note the : separating the username and password)
  - Change the # of threads to the amount of threads you would like to use (number of CPU-cores can be used as a reference)
5. Run the command below in Command Prompt or Terminal.

Windows

```
dapscoin-poa-minerd.exe --config=poa_miner_configuration.json
```

Linux/Mac

```
./dapscoin-poa-minerd --config=poa_miner_configuration.json
```
